SECTION A. Project Title: Radiation Detection and Nuclear Materials Laboratory Equipment in Support of Student Training and Research by the Department of Mechanical and Nuclear Engineering at Virginia Commonwealth University

SECTION B. Project Description

This project will support the development of the educational and research infrastructure of the new nuclear engineering program at Virginia Commonwealth University by purchasing a HPGe detector, a gas proportional counter, and a NaI scintillation detector. This equipment will be used for teaching purposes and in performing research.

SECTION C. Environmental Aspects / Potential Sources of Impact

Radioactive Material Use – Research and student labs will be equipped with radiation detection and characterization instrumentation. The materials used for fatigue testing and for radiation measurements will be potentially slightly activated. Student measurements will also use small radiation sources, limited by laboratory limits. The action would not create additional environmental impacts above those already occurring at the university.

SECTION D. Determine the Level of Environmental Review (or Documentation) and Reference(s): Identify the applicable categorical exclusion from 10 CFR 1021, Appendix B, give the appropriate justification, and the approval date.

Note: For Categorical Exclusions (CXs) the proposed action must not: 1) threaten a violation of applicable statutory, regulatory, or permit requirements for environmental, safety, and health, including requirements of DOE orders; 2) require siting and construction or major expansion of waste storage, disposal, recovery, or treatment facilities; 3) disturb hazardous substances, pollutants, contaminants, or CERCLA-excluded petroleum and natural gas products that pre-exist in the environment such that there would be uncontrolled or unpermitted releases; 4) adversely affect environmentally sensitive resources. In addition, no extraordinary circumstances related to the proposal exist which would affect the significance of the action, and the action is not “connected” nor “related” (40 CFR 1508.25(a)(1) and (2), respectively) to other actions with potentially or cumulatively significant impacts.

References: B3.6 Siting, construction, modification, operation, and decommissioning of facilities for small-scale research and development projects; conventional laboratory operations (such as preparation of chemical standards and sample analysis); and small-scale pilot projects (generally less than 2 years) frequently conducted to verify a concept before demonstration actions, provided that construction or modification would be within or contiguous to a previously disturbed or developed area (where active utilities and currently used roads are readily accessible). Not included in this category are demonstration actions, meaning actions that are undertaken at a scale to show whether a technology would be viable on a larger scale and suitable for commercial development.

Justification: The activity consists of purchasing equipment for teaching and research purposes.

Is the project funded by the American Recovery and Reinvestment Act of 2009 (Recovery Act)  □ Yes  □ No

Approved by Jack Depperschmidt, DOE-ID NEPA Compliance Officer on 5/17/2012
