SECTION A.  Project Title:  High-Speed Thermogravimetry Equipped with Mass Spectrometry for Thermodynamic and Kinetic Study of Nuclear Energy Materials – Clemson University

SECTION B.  Project Description

Clemson University proposes to acquire a high-speed thermogravimetric balance coupled with a mass spectrometer for analysis of nuclear materials thermodynamic and kinetic behavior during reactor accidents involving a rapid rise in temperature. The system is able to provide insight into defect chemistry, diffusion, surface exchange coefficient, reaction mechanism, entropy, and enthalpy for nuclear energy materials and processes (including radionuclide materials). Coupled with additional equipment in the Department of Materials Science and Engineering at Clemson, this equipment will support capability for thermodynamic characterization of nuclear energy materials and processes for the University as well as collaborating national laboratories and universities.

SECTION C.  Environmental Aspects / Potential Sources of Impact

The university has procedures in place to handle any waste that will be generated through this project. The action would not create additional environmental impacts above those already occurring at the university.

SECTION D.  Determine the Level of Environmental Review (or Documentation) and Reference(s):  Identify the applicable categorical exclusion from 10 CFR 1021, Appendix B, give the appropriate justification, and the approval date.

Note: For Categorical Exclusions (CXs) the proposed action must not: 1) threaten a violation of applicable statutory, regulatory, or permit requirements for environmental, safety, and health, including requirements of DOE orders; 2) require siting and construction or major expansion of waste storage, disposal, recovery, or treatment facilities; 3) disturb hazardous substances, pollutants, contaminants, or CERCLA-excluded petroleum and natural gas products that pre-exist in the environment such that there would be uncontrolled or unpermitted releases; 4) adversely affect environmentally sensitive resources. In addition, no extraordinary circumstances related to the proposal exist which would affect the significance of the action, and the action is not “connected” nor “related” (40 CFR 1508.25(a)(1) and (2), respectively) to other actions with potentially or cumulatively significant impacts.

References:  B1.31 Installation or relocation and operation of machinery and equipment (including, but not limited to, laboratory equipment, electronic hardware, manufacturing machinery, maintenance equipment, and health and safety equipment), provided that uses of the installed or relocated items are consistent with the general missions of the receiving structure. Covered actions include modifications to an existing building, within or contiguous to a previously disturbed or developed area, that are necessary for equipment installation and relocation. Such modifications would not appreciably increase the footprint or height of the existing building or have the potential to cause significant changes to the type and magnitude of environmental impacts.

Justification:  The activity consists of purchasing and installing equipment to investigate nuclear energy materials and processes.

Is the project funded by the American Recovery and Reinvestment Act of 2009 (Recovery Act)  □ Yes  □ No

Approved by Jason Sturm, DOE-ID NEPA Compliance Officer on 7/20/2020
