SECTION A. Project Title: ATR Complex Reactor Support Building

SECTION B. Project Description and Purpose:

Current facilities at the Advanced Test Reactor (ATR) Complex that house food services, meetings, training space, and administrative and support offices are aged, experiencing increasing repair and maintenance needs, lack modern space design features or are not located near staff population areas. The proposed project will construct a modern building that incorporates three primary space types to meet the needs of resident staff and visitors. This includes offices, administrative support spaces, and a versatile fast-casual style cafeteria where dining hall space also serves as a meeting and training center. The fast-casual style cafeteria will be designed to serve the entire ATR population and the associated dining area will be designed with break-out meeting spaces and features to allow conversion to hold large gatherings. The preferred building design uses a modular design concept with prefabricated construction components. Laboratory space is not included in the facility scope, and radiological work will not be conducted in the building. The building will be constructed southwest of ATR (TRA-670) and located north of the recently constructed ATR Maintenance Support Building (TRA-1643). The TRA-1706 Radioactive Material Storage Area (also referred to as TRA-617) is located within the identified construction area and is approximately 24,000 sq. ft. This storage pad has been approved for demolition in EC INL-18-088, ATR Complex Excess Facilities/Structures Deactivation and Demotion, and will be demolished as part of this project. Building utilities (electrical power, sewer, fire and potable water, and fiber optic cable) will be distributed from existing ATR utilities. The project will not construct new potable water distribution or sewer collection mains as the building will be service connected to existing mains.

The exterior facility design concepts have been developed to fit within and complement the varied and extensive materials, finishes, and colors of the existing ATR facilities. The primary exterior materials proposed for this new facility are architectural pre-cast concrete panels, pre-finished metal wall panel accents, and aluminum framed glazing systems. The colors and finishes of these new systems will be selected and finalized during the design process to complement existing ATR facilities. The facilities that will be utilized for design precedence include the ATR building (TRA-670) and new ATR Maintenance Support Building (TRA-1643).

**SECTION C. Environmental Aspects or Potential Sources of Impact:**

**Air Emissions**

- Generating air pollutants, including but not limited to chemical and combustion emissions
- Generating hazardous emissions, such as by operation of fuel burning equipment, use of construction or maintenance products that contain hazardous constituents, and disturbance of contaminated soils
- Maintaining, servicing, or repairing stationary heating, ventilation, air conditioning and refrigeration equipment
- Maintaining, testing, or disposing of halon-containing equipment or halon
- Acquiring and disposing of chemicals
- Generating fugitive dust or other fugitive emissions
- Purchasing, relocating, operating, modifying, or maintaining portable air emission sources, including non-road internal combustion engines.

**Discharging to Surface-, Storm-, or Ground Water**

- Construction or modification of drinking water systems and cross connections
- Maintaining, repairing, or altering drinking water systems and cross connections
- Using drinking water systems and cross connections
- Constructing or modifying sewage and other reuse systems
- Discharging Wastewaters
- Managing storm water discharges.
Disturbing Cultural or Biological Resources
Activities addressed by this EC have the potential to disturb cultural or biological resources through the constructing facilities, structures, equipment and/or processes. Construction of new facilities may adversely affect the historic character of adjacent historic properties.

Generating and Managing Waste
Activities addressed will generate waste typical of construction activities, including concrete from pad demolition.

Releasing Contaminants
Typical construction chemicals such as fuels, lubricants, adhesives, paints, concrete, concrete cure, asphalt, refrigerants, etc., will be used and will be submitted to chemical inventory lists with associated Safety Data Sheets (SDSs) for approval in the vendor data system prior to use. The facility Chemical Coordinator will enter these chemicals into the INL Chemical Management Database. All chemicals will be managed in accordance with laboratory procedures. When disposing surplus chemicals, project personnel must contact the facility Chemical Coordinator for disposition instructions.

Although not anticipated, there is a potential for spills when using chemicals or fueling equipment. In the event of a spill, notify facility PEL. If the PEL cannot be contacted, report the release to the Spill Notification Team (208-241-6400). Clean up the spill and turn over spill cleanup materials to WGS.

Using, Reusing, and Conserving Natural Resources
Activities addressed by this EC have the potential for use, reuse and conservation of natural resources related to:
- Building energy use
- Consuming potable or industrial water
- Generating landfill waste or construction and demolition wastes
- Generating recyclable materials
- Providing an opportunity to engage in sustainable acquisition practices.

SECTION D. Determine Recommended Level of Environmental Review, Identify Reference(s), and State Justification:
Identify the applicable categorical exclusion from 10 Code of Federal Regulation (CFR) 1021, Appendix B, give the appropriate justification, and the approval date.

For Categorical Exclusions (CXs), the proposed action must not: (1) threaten a violation of applicable statutory, regulatory, or permit requirements for environmental, safety, and health, or similar requirements of Department of Energy (DOE) or Executive Orders; (2) require siting and construction or major expansion of waste storage, disposal, recovery, or treatment or facilities; (3) disturb hazardous substances, pollutants, contaminants, or Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)-excluded petroleum and natural gas products that pre-exist in the environment such that there would be uncontrolled or unpermitted releases; (4) have the potential to cause significant impacts on environmentally sensitive resources (see 10 CFR 1021). In addition, no extraordinary circumstances related to the proposal exist that would affect the significance of the action. In addition, the action is not "connected" to other action actions (40 CFR 1508.25(a)(1) and is not related to other actions with individually insignificant but cumulatively significant impacts (40 CFR 1608.27(b)(7)).

References:
10 CFR 1021, Appendix B to subpart D, item B1.15, "Siting, construction or modification, and operation of support buildings and support structures."

Justification:
B1.15 "Siting, construction or modification, and operation of support buildings and support structures (including, but not limited to, trailers and prefabricated and modular buildings) within or contiguous to an already developed area (where active utilities and currently used roads are readily accessible). Covered support buildings and structures include, but are not limited to, those for office purposes; parking; cafeteria services; education and training; visitor reception; computer and data processing services; health services or recreation activities; routine maintenance activities; storage of supplies and equipment for administrative services and routine maintenance activities; security (such as security posts); fire protection; small-scale fabrication (such as machine shop activities), assembly, and testing of non-nuclear equipment or components; and similar support purposes, but exclude facilities for nuclear weapons activities and waste storage activities covered in B1.10, B1.29, B1.35, B2.6, B6.2, B6.5, B6.6, and B6.10 of this appendix."

Is the project funded by the American Recovery and Reinvestment Act of 2009 (Recovery Act) □ Yes □ No

Approved by Jason Sturm, DOE-ID NEPA Compliance Officer on:02/10/2021
